PUPDOGE

WHITEPAPER

https://pupdoge.finance

INTRODUCTION

A new cryptocurrency called Pup Doge Coin was launched in July 2021, making it one of the fastest-growing cryptocurrencies on the market. Besides helping save dogs as well as bringing crypto to the average person, Pup Doge is decentralized. The Binance Smart Chain (BSC) technology made Pup Doge a faster Coin with 10x faster block speeds and a cheaper gas fee.

Doge, the meme father of Pup Doge Coin, has taught him a few tricks and lessons. Developed by members of the online community of Doge Coin, using his new improved transaction speeds and adorableness, Pup Doge wishes to impress his father. Pup Doge AutoBoost function is built mathematically to do variable buybacks which adjust based on volume in order to maintain stability. AutoBoost will vary based on the transactions over the past 24 hours which will continue to adjust based on the volume.
AutoBoost will buy back variable amounts every time a sale occurs with PUPDOGE. This is a unique function which is more powerful than just a standard buyback token.

DISCLAIMER

It is not intended to create or in any way put into effect a contractual relationship in any way through the information contained in this whitepaper. This whitepaper is primarily designed to provide relevant information to potential holders so that they can comprehensively analyze the project and make an informed decision. It is imperative that you read this whitepaper carefully before partaking in Pup Doge Coin. Statements, estimates, and financial information in this whitepaper incorporate and consider certain known and unknown risk factors, which could affect estimated results in fact or influence them substantially, differing factually and significantly from those featured in forward-looking statements.

Table of Contents

01 ABSTRACT

Pup Doge's main development directions

Pup Doge aims to become the most influential project in the world through decentralization. We are building blockchain projects of high quality, with audit, marketing & advertising, star endorsements, and a strong technical team. Despite our token status, pupdooge is also a platform that provides access to a multitude of other products. In addition to pupdooge cross-chain technology, Pup Doge new financial technologies, and Pup Doge blockchain games, the team will develop Pup Doge cross-chain technology.

Pup Doge cross chain technology

Public chain projects have shown improved performance, however, each chain has its own distinct technical architectures, which are not linked to one another, so instead, they form an array of information. For DAPP developers, this can pose a problem when choosing which public chains to build. Pup Doge cross-chain technology enables the creation of different types of Blockchains.

Collaboration between platforms involving the exchange of assets, information, and applications. The service enables data exchange between different blockchain networks and acts as a bridge between different public chains.

Transmission, and greatly reduce the cost of transmission

Pup Doge NFTs

The popularity of NFT continues to grow, and its features are indisputable, irreplaceable, and unique. A combination of art and finance can be found in the NFT System Box, which Pup Doge is launching shortly.

Pupdoge blockchain game

The biggest difference between blockchain games and traditional games is that blockchain games not only consider entertainment, but also design reasonable economic models, an opportunity for early participants to create wealth. Traditional games' incentives are taken by game developers, while blockchain games' incentives are shared to all holders. More and more games have moved to the latest trends. ie Axie infinity, cryptoblades Skill.
Pup Doge's foresight has opened the team's eyes to new blockchain opportunities.

02 TEAM ABSTRACT

Little Pup. Huge Ambition

The team is a group of tech-inclined mates from all over the world. The goal is to make Pup Doge the most influential decentralized project in the world. In order to grow rapidly, the team has obtained the first angel investment of US $10 million, development and advertising will be heavily enforced (e.g Time Square Broadway, endorsement by Hollywood Star as well as Snooker Legend). We're going to make Pup Doge the focal point in cryptocurrency.

Aiming to be an impactful blockchain platform, Pup Doge will launch NFT box and large-scale blockchain game – Axie Infinity pet game, accompanied by attractive daily rewards. Pup Doge is setting a new trend in the Crypto World.

03 values

TRANSPARENCY

PupDoge was designed to support large volumes of investors and generate healthy returns for participants. It is the first ever Hyper deflationary and AutoBOOST token. This means that Pup Doge will automatically follow every sell with a buy to prevent large selloffs.

COMMUNITY

At the end of the day, Pup Doge is a community owned company, so we encourage collaboration between members on marketing, development, community management, and more.

TRUST

There is no substitute for trust when it comes to cryptocurrencies. By ensuring holder funds' security, we mean not only providing transparency. (E.g., include audits of Pup Doge's code.)

LONGEVITY

Pup Doge looks forward to a long-term partnership. A significant investment will result from our long-term plan, which is not dependent on temporary trends.

04 Pup Doge Coin

In contrast to competing chains, the Binance Smart Chain (BSC) was developed to incorporate solidity-based smart contracts at a much faster speed and efficiency than other chains. The rapid swapping of BSC's decentralized exchanges and extremely low fees have made BSC one of the most widely used blockchains for Decentralized Finance (Defi). BEP-20 develops by the BinanceTeam forms the basis of BSC's token protocol. Block speed is five seconds rather than doge, which is one minute. The following two articles compare block speeds:

Bep-20/BSC 5 seconds:
https://trustwallet.com/blog/binance-smart-chain-in-numbers

Doge 1 Minute:
https://coinsutra.com/transaction-speeds/

Pros of Binance Smart Chain are:
Users and developers can be assured of safety and security thanks to this proprietary blockchain.

The native dual chain compatibility will allow communication across chains and scaling for performance-intensive dApps that require a quick and intuitive user experience. In addition to EVM compatibility, it offers fast and cheaper transactions and supports all the current Ethereum tooling.

Through Proof of Staked Authority, it will provide a decentralized approach and allow significant community involvement owing to the 21 validators that validate transactions on the blockchain.

PupDoge is not responsible for the actions of the Binance Smart Chain network

05 Ecosystem

Community-Powered

Its fun, vibrant community owns Pup Doge, which is decentralized. The Pup Doge community welcomes and embraces diverse perspectives to build a world-class community. To aid in the rescue of dogs in need.

Instant Rewards

As part of the PupDoge Community, holders will be distributed a certain commission on every transaction. Simply holding PupDoge in your wallet increases its value. Keep an eye on your Pup's growth with every transaction!

Farming

40% of the total currency of Pup Doge is used for farming output, which is the highest yield of farming industry.

It is divided into six pools. Investors can not only farm Pup Doge, but also able to farm BNB.

The farming contract is added to the white list, and the player does not deduct any handling charge for each deposit.

06 Pup Protocol

Three simple functions are employed by Pup Doge: Reflection, Buyback Fund, and Development. Trades are charged at 12% and 18% respectively.

Buying Fee (12%)

- 6% to buyback fund
- 4% to development/marketing
- 2% reflection to Holders

Selling Fee (18%)

- 7% to buyback fund
- 7% reflection to holders
- 4% development/marketing

Phase I – Launch

- Token and contract deployment on the chain
- Website Launch
- Coingecko & CoinMarketCap Listing
- Cooperation with PancakeSwap, DexGuru, PooCoin
- Airdrop Platform
- Code Audit

Phase II – Growth

- Listing on well-known exchanges (e.g Binance, MXC, Gate.io)
- Trend and Token data analysis platform Community Voting Platform
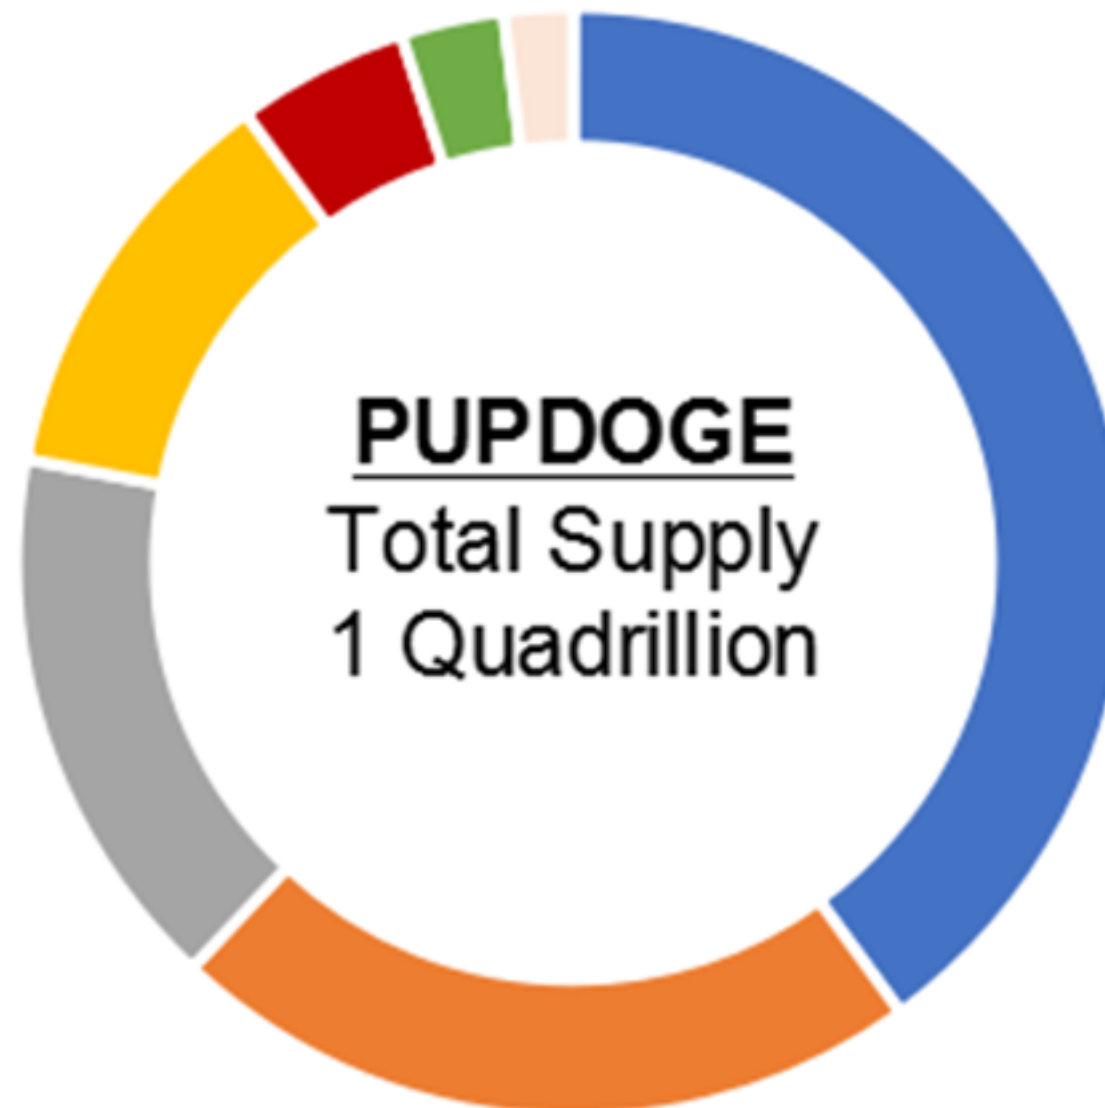

Phase III – Expansion

- Listing on more exchange
- Pup Swap (Decentralize Exchange)
- Cooperate with other project(s)
- Reality Predictions
- Set up more LP Liquidity Pools

Phase IV – Utility

- 3 more CEX Listing
- Pup Wallet
- Pup Crate
- 80,000 Holders & 40,000 Telegram Members

pup Doge reserves the right to edit this White Paper at any time.
